GSE:

7. Import of TouchGFX-projects also on Linux

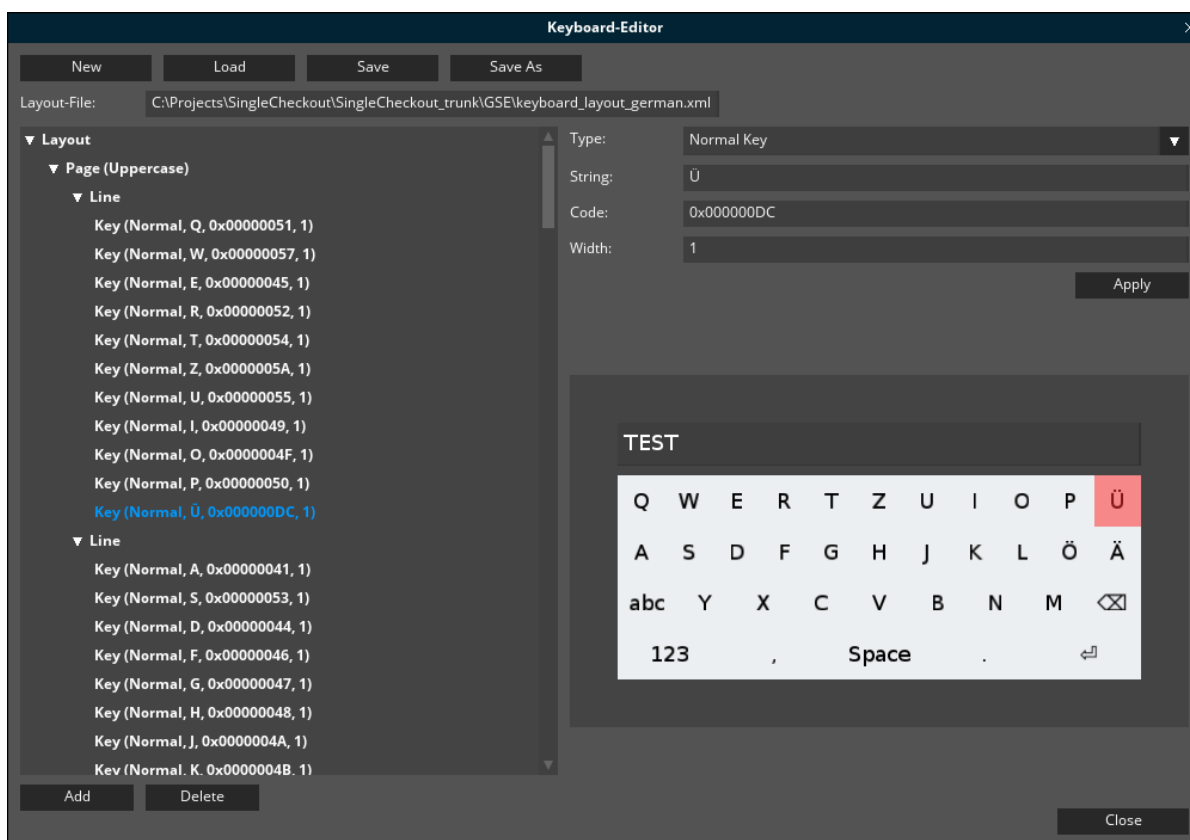

8. Bigger tooltips for dialogs

Tooltips for dialogs include the name and size

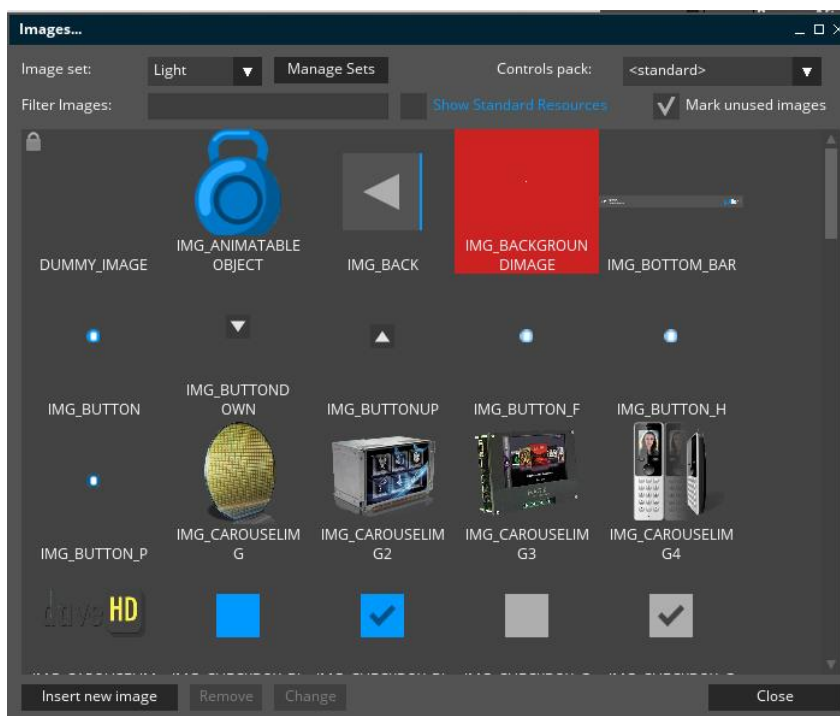

9. Keyboard-Layout Editor

Keyboard-layouts can easily be created and used with the new OnScreenKeyboard

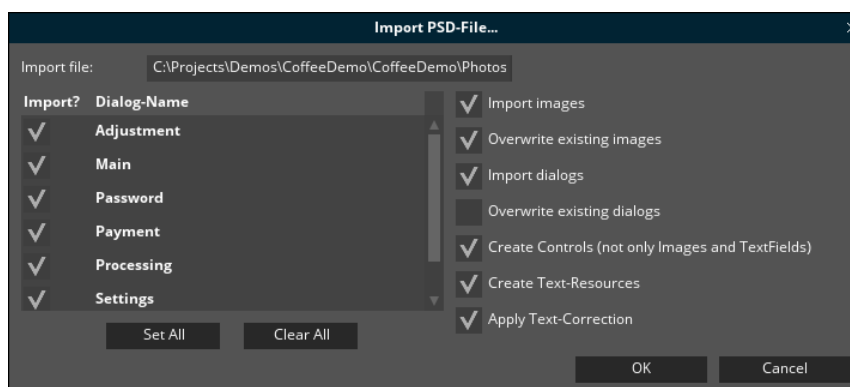

10. Mark unused resources

Check for unused resources and mark in Manage-dialogs

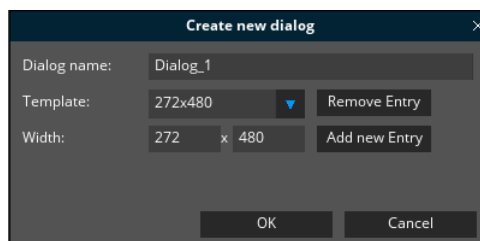

11. Re-Import PSD-Files

When re-importing PSD-files already existing objects with changes are automatically updated keeping attached dynamics.

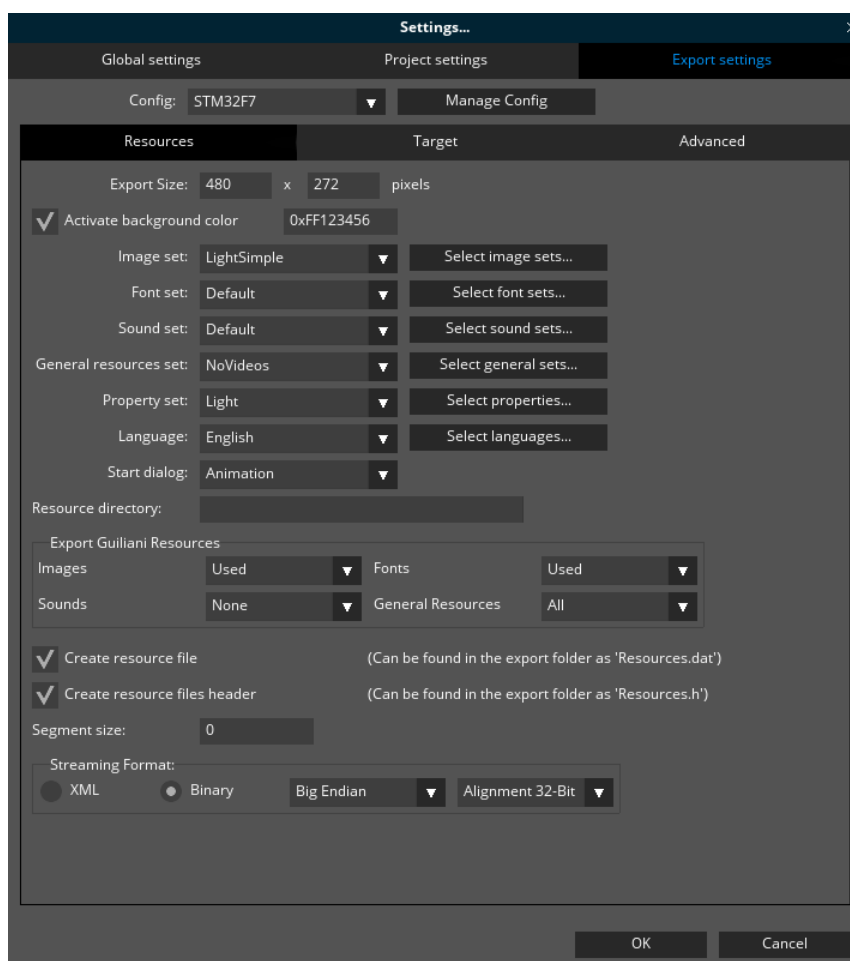

12. Templates for dialog-sizes

Often used dialog-sizes can be saved as templates and easily selected from list

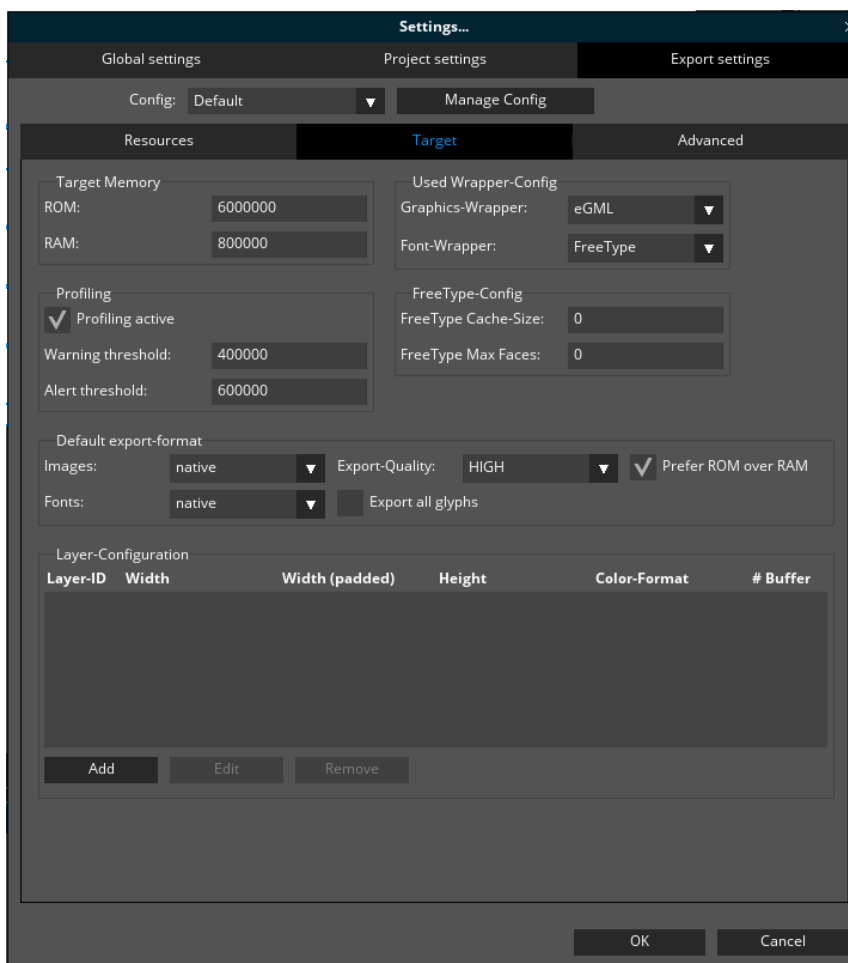

13. Advanced Export-Settings for Resources

- Each type of standard resources can now be exported in various ways: None, All, Used
- Segment-size for splitting up Resource-files and Resource-headers

14. Advanced Export-Settings for target

- Use target-memory settings for profiling in simulation
- Select target-wrapper types
- Enter layer-configuration
- A warning will be displayed if exported resources won't fit in ROM

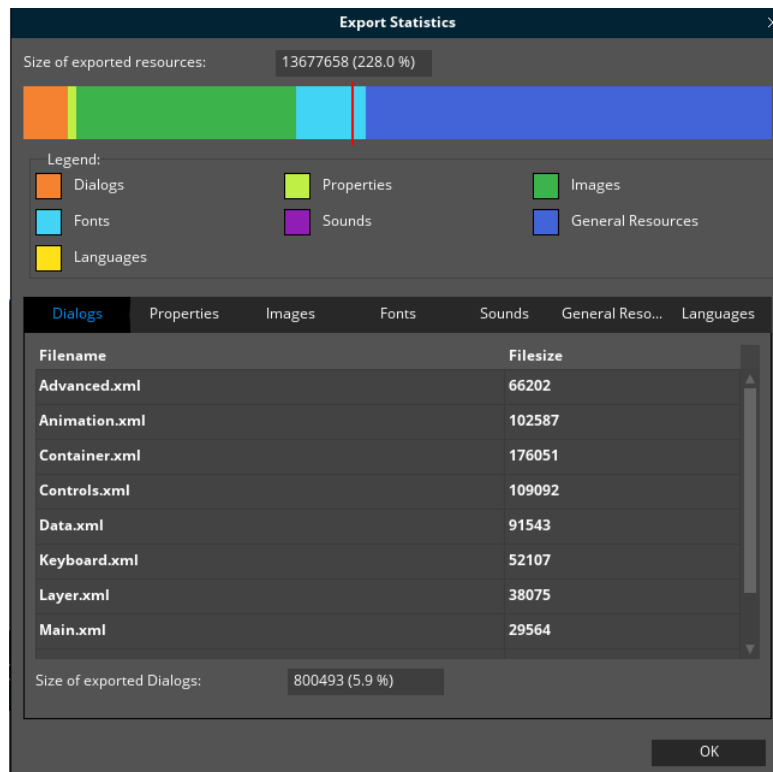

15. New Export format AUTO

AUTO will automatically choose the best export-format for each image/font based on used Wrapper and quality-setting. "Prefer ROM over RAM" will influence the formats will be chosen.

16. New detailed statistics at end of export

- Show limit for ROM-size
- Percentage and size for each type and individual file
- Can be filtered for each resource-type
- Can be sorted by name and size

17. Set overlay-image for dialog-editor

Use an image as a template for the dialog or other purposes
